The most popular kinds of cedar fencing on the market today are Northern White cedar and Western Red cedar. Western Red cedar in particular can be bought in an array of grades, sizes, and accents, making it ideal for creating one-of-a-kind designs. Leaving Western Red cedar either stained or untreated will still result in its taking on a silvery gray color in time from weathering.

{mosgoogle left} Although cedar is considered by many experts in fencing to be the most durable of wood, there are those who also say that it should, like other wooden fence types, be stained with a protecting chemical solution to protect it against rot and insects.

The thing that is so prized about cedar wood for fencing is its quality of being stable in its dimensions. Due to this stability, as well as its beautiful natural coloring, Western Red cedar wood is an ideal choice for outdoor fencing. Cedar wood readily takes to paints and stains. Therefore, it can readily be altered to match your property's landscape or your house—another quality that makes it so desirable.

Like its “cedar counterpart”, the Northern White cedar can be found in a wide array of sizes, grades, and accents to suit your particular needs or desires. Northern White cedar is easily molded and shaped, enabling it to be transformed into one-of-a-kind designs. Northern White cedar is arguably even stronger and more enduring than its counterpart. Just as with Western Red and all other cedar woods, Northern White cedar readily takes to being stained or painted, so it is ideally suited to being a fencing that can be changed as your landscape, out-buildings, or house's appearance changes.

To many fencing veterans and experts, the most desirable thing of them all about cedar is its rot-resistant quality. Cedar has a natural resistance to termite damage and to rotting from wind and weathering. Its natural resistance along these lines is second to none, and that's why so many people use cedar wood for their fencing as well as other wood items such as chests of drawers, siding on their homes, and especially outdoor furniture. Due to the fact that it is exceptionally light while at once being so durable, cedar wood fencing is not going to warp or shrink in the way that so many of the other choices in wood fencing will over time. When considering putting up a fence, by all means check out some cedar wood choices.
